

GP Education – Skin Cancer

FROM THE PEAK BODY FOR SPECIALISTS
IN DERMATOLOGY ACCREDITED BY THE
AUSTRALIAN MEDICAL COUNCIL

THE AUSTRALASIAN COLLEGE
OF DERMATOLOGISTS

Enrol now in
GP Education – Skin Cancer.
The Australasian College
of Dermatologists is now
delivering 4 certificates.

CERTIFICATE

**Practical
Dermoscopy**

CERTIFICATE

**Benign and
Precancerous
Lesions**

CERTIFICATE

**Melanoma
and Other
Skin Cancers**

CERTIFICATE

**Practical
Therapies
(Basic &
Advanced)**

WORKSHOP

**Skin
Cancer
Workshop**

COMPLETE ALL 4
CERTIFICATES AND THE
WORKSHOP TO RECEIVE AN
ADVANCED CERTIFICATE.

*GP Education
– Skin Cancer certificates*
all courses developed for GPs
and delivered by specialist
Dermatologists qualified by
the ACD.

Aims:

Australia has one of the highest rates of skin cancer in the world, and this is treated predominantly within general practice. Crucial to management of skin malignancy is accurate diagnosis. These four certificates support the detection of the clinical features of skin cancer, and strive to increase diagnostic accuracy.

GP Education

– Skin Cancer certificates

Each certificate is self-paced and delivered in an online learning mode over 12 weeks. Clinic case studies and quiz questions are required to be completed at the end of each topic together with an online exam and or case study.

THE WORKSHOP TO RECEIVE AN
ADVANCED CERTIFICATE.

Learning outcomes:

Practical Dermoscopy

Australia has one of the highest rates of skin cancer in the world, and this is treated predominantly within general practice. Crucial to management of skin malignancy is accurate diagnosis. Dermoscopy allows the detection of clinical features invisible to the naked eye, and has been well shown to increase the diagnostic accuracy of users.

In Practical Dermoscopy, General Practitioners learn about the theory of dermoscopy and how to use a dermatoscope in practice to manage patients with skin cancer.

Benign and Precancerous Lesions

To provide General Practitioners with the skills and knowledge to distinguish a range of benign and precancerous lesions that are often identified by patients as skin lesions of concern and if required provide patients with a recommended treatment plan.

Melanoma and Other Skin Cancers

Australia leads the world in the number of diagnosed melanomas and this course will provide you with knowledge on how to identify, differentiate and evaluate melanoma and other skin cancers.

Practical Therapies (Basic & Advanced)

To provide General Practitioners with the skills and knowledge to perform basic dermatological surgery and procedures (cryotherapy, biopsies, electrodesiccation and curettage, intralesional steroid injection, sutures and suturing) and understand the principles of full thickness skin grafts, split thickness skin grafts, principles of flap repairs, regional closures) and how to manage surgical risk and complications.

Further surgical experience:

Skin Cancer Workshop

At this workshop GPs put dermoscopy theory into practice and develop a thorough understanding of how dermoscopy can be used to manage patients with skin cancer.

Please note: There is a pre-requisite/co-requisite requirement to enrol in this course. You must have completed the Practical Dermoscopy course first or be enrolled in it at the same time.
